Power BI Report

RetailIQ

Select Month	Total Revenue	Total Sales	Average Order Value	Average Rating
All	\$208K	1000	\$207.79	2.97

Summary

- The RetailIQ dashboard provides a comprehensive view of sales performance, customer behavior, product performance, and customer satisfaction.
- The business generated a total revenue of ₹207,788 from 1,000 transactions, with an average order value of ₹207.79 and an average customer rating of 2.97/5.
- Revenue is distributed fairly evenly across cities, customer segments, and product categories, indicating a diversified customer base and stable business performance.

Key Insights

- Customers show stronger purchasing behavior toward Sporting products, making it a key contributor to business growth.
- Revenue growth is driven by medium-value purchases rather than simply increasing the number of transactions.
- The business is not dependent on a single region and has a balanced geographical presence.
- Although Sporting drives revenue, customers are less satisfied with this category compared to others, indicating room for improvement.
- The business experiences steady customer activity and maintains stable sales performance over time.
- Higher revenue does not necessarily correspond to higher customer satisfaction. Sporting generates the most revenue but has the lowest average rating.
- Cities exhibit similar revenue levels, reducing regional business risk.
- Medium-value transactions contribute disproportionately to total revenue.
- The sales distribution is right-skewed, meaning most purchases are smaller transactions while a few large purchases contribute significantly to revenue.
- Customer ratings across categories remain clustered around 3/5, suggesting moderate but improvable customer satisfaction.

Recommendations

- Continue promoting and stocking Sporting products due to their strong revenue contribution.
- Investigate customer feedback for Sporting products to improve ratings and customer experience.
- Use Furniture as a benchmark to identify practices that contribute to higher customer satisfaction.
- Improve product quality, pricing strategy, or post-purchase experience for lower-rated categories.
- Encourage customers in the Low Sales Category to move into the Medium Sales Category through:
 - Product bundles
 - Cross-selling
 - Upselling strategies
- Maintain investment across all cities since revenue distribution is balanced.
- Run targeted campaigns in Chicago to close the small gap with New York and Dallas.
- Use date-based revenue trends to align inventory planning and staffing with peak demand periods.
- Monitor revenue spikes to identify successful promotions or seasonal demand patterns.

Conclusion

- RetailIQ demonstrates a healthy and diversified retail business with stable sales across cities, customer segments, and product categories.
- Sporting products are the strongest revenue driver, while Medium-value transactions contribute the largest share of revenue.
- Customer satisfaction remains moderate, with opportunities to improve high-revenue categories such as Sporting.
- The balanced regional performance reduces business risk, and steady revenue trends indicate consistent customer demand.
- By improving customer satisfaction in key categories and increasing medium-value purchases through targeted marketing strategies, the business can drive sustainable revenue growth and strengthen customer loyalty.
